AUTHOR INDEX TO NOVA SCOTIA DEPARTMENT OF MINES AND ENERGY ASSESSMENT REPORTS, OPEN FILES, PUBLICATIONS AND THESES 1981 - 1990

INTRODUCTION

Report 91-3 is a bibliographic author index to all the Nova Scotia Department of Mines and Energy mineral and petroleum exploration assessment reports, open files, publications and theses that became available between January 1981 and December 1990.

Previously published indexes to the above documents, up to 1980, include: **Report 81-4, Index to Assessment Reports 1864-1980** and **Report 81-6, Index to Publications, Open File Reports and Theses 1862-1980**. Between 1981 and 1990, a number of individual five-year indexes (**Reports 86-2, 86-4**) and one-year indexes (**Reports 87-3, 88-2, 89-2, 90-2**) were published. These six individual indexes have now all been consolidated into two indexes, namely: **Report 91-2, NTS Location Index to Nova Scotia Department of Mine and Energy Assessment Reports, Open Files, Publications and Theses 1981-1990** and **Report 91-3, Author Index to Nova Scotia Department of Mines and Energy Assessment Reports, Open Files, Publications and Theses 1981-1990**. Consequently, **Reports 91-2** and **91-3** supersede all previously published indexes for the ten-year period 1981-1990, and should be used in preference to these individual one-year and five-year indexes. A microfiche Subject Index (**Report 91-4**) to **Reports 91-2** and **91-3** is also available.

All the assessment reports cited in this report have been microfilmed and can be consulted in the libraries of the Halifax and Stellarton offices of the Department. Microfiche copies of assessment reports can be purchased directly from Precision Microfilming Services, 3770 Kempt Road, Halifax, Nova Scotia, B3K 4X8 (902-455-5451). If ordering microfiche copies of assessment reports, please quote the full assessment report number, e.g. AR 11D/10C 21-H-91(01); AR 84-001. (The latter form of assessment report numbering began in 1984).

All the open file illustrations, open file maps, open file reports and publications cited in this report can be consulted in the libraries of the Halifax and Stellarton offices of the Department. All the publications can be purchased from both Department libraries, and microfiche copies of the open files can be purchased directly from Precision Microfilming Services.

Most of the theses cited in this report can be consulted on microfiche in the Halifax library of the Department. When a thesis is not available in the Halifax library, this is so indicated in the thesis citation.

INDEX ORGANIZATION

Report 91-3 is an alphabetic listing of all the personal authors, corporate authors, exploration licensees, exploration companies, agencies and institutions who are responsible for generating or sponsoring all the documents cited in **Report 91-3**. When a document cannot be assigned any of the above types of authors, it is cited under Anonymous. Under any given author name, documents are sorted alphabetically by document type (see below) and subsorted chronologically.

DOCUMENT TYPE

Assessment Reports

Assessment reports are reports submitted to the Department by holders of mineral and petroleum exploration licences. These reports describe exploration work and studies conducted by the licensees on ground covered by their exploration licences.

The titles of the assessment reports cited in this index are not the original titles of the reports, but are modified titles composed by the authors of this report. The modified titles are designed so that the reader can determine exactly what types of geological, geochemical, geophysical, drilling and other exploration activities are described in each assessment report.

Each assessment report is uniquely identified by an assigned report number, e.g. AR 11D/10C 21-H-91(01); AR 84-001. The latter form of report numbering, e.g. AR 84-001 began in 1984. This latter number is simply a sequential, five digit number which reflects both the year of receipt of the assessment report in the Department, e.g. 84 for 1984, and the actual number of reports received in that year, e.g. -001 for the first report, and so on. Assessment reports with publication dates that predate 1984, but were received in the Department after 1984, have been assigned report numbers under the new numbering system, e.g. AR 82-001.

The old form of report numbering, e.g. AR 11D/10C 21-H-91(01) is a code consisting of the following five components: claim reference map, commodity, county, location and successive report number. For example:

11D/10C = claim reference map
21 = commodity (= gold)
H = county (= Halifax)
91 = location (= Crows Hill Lake)
(01) = successive report number (= the first report in the assessment file 11D/10C 21-H-91)

These five components are described below and the commodities and counties are listed in Table 1.

Claim Reference Map

The claim reference map system (Fig. 1) is used by the Nova Scotia Department of Mines and Energy for map staking of mineral exploration claims. This claim reference map system is based upon the National Topographic System (NTS), whereby each claim reference map is one-quarter of a standard 1:50 000 NTS map. For example, NTS map 11D/10 consists of claim reference maps 11D/10A, 11D/10B, 11D/10C and 11D/10D, these maps being lettered in a clockwise direction from the southeastern corner of NTS map 11D/10.

Commodity

Commodity represents the primary element, mineral or rock that formed the target of the exploration activities described in the assessment report. Each commodity is assigned a numeric code which is identified in Table 1. Assigning one commodity to an assessment report is an arbitrary decision, especially when several commodities could form the exploration target, e.g. tin, tungsten and molybdenum. In such cases, although the report is identified by only one commodity in the report number, the other relevant commodities are recorded as keywords in the GEOSCAN database (see below). Thus, the database can be searched for any number of commodities and the relevant reports identified and retrieved.

County

County represents one of the 18 formal districts of Nova Scotia in which the exploration activities were conducted. Each county is assigned a letter code which is identified in Table 1. For convenience, unofficial counties such as Cape Breton Island, Offshore and Nova Scotia have also been added to this category. Again, only one county can appear in the assessment report number. If an assessment report crosses county borders, the additional counties are recorded in the GEOSCAN database.

Location

Location represents a specific town, village, lake, stream, hill, swamp that falls within the area of the exploration activities described in the assessment report. A list of these locations and their corresponding number codes is kept on file in the Department. However, the location is always named in the report title.

Successive Report Number

The successive report number (01 and onwards) represents an individual assessment report assigned to a particular assessment file. In general, reports are numbered from oldest to most recent. The number (00), when used, represents a miscellaneous information category in which is usually found old memos, letters, incomplete reports and individual maps that cannot be assigned to specific assessment reports.

Open File Illustrations

Open File Illustrations (OFIs) are unpublished drawings which are not maps, e.g. mine cross-sections, geological and drillhole sections, stratigraphic columns. These illustrations were generated or collected by the Nova Scotia Department of Mines and Energy between 1981 and 1990, and all depict some aspect of the geoscience of Nova Scotia. Open File Illustrations can be authored by any individual, agency or organization. Open File Illustrations do not necessarily originate from within the Nova Scotia Department of Mines and Energy, although many do. Open File Illustrations are assigned a sequential, five digit number, e.g. OFI 89-001; OFI 89-002 reflecting their completion date. When it is impossible to obtain a definitive completion date for an illustration, the prefix ND for No Date is assigned in the date part of the OFI number, e.g. ND - 215.

Open File Maps

Open File Maps (OFMs) are unpublished mapsthat depict some aspect of the geoscience of Nova Scotia, that were generated or collected by the Nova Scotia Department of Mines and Energy between 1981 and 1990.

Open File Reports

Open File Reports (OFRs) are unpublished reports that describe some aspect of the geoscience of Nova Scotia, that were generated or collected by the Nova Scotia Department of Mines and Energy between 1981 and 1990.

Publications

Publications are the official documents published by the Nova Scotia Department of Mines and Energy that became available between 1981 and 1990. Official Department publications include published maps and published texts, with texts bound within Department publication covers. Published texts include stand-alone monographs such as Annual Reports, Bulletins, Memoirs, Reports, and also individual articles contained within monographic documents such as Annual Reports and Reports of Activities.

Theses

Theses are university and college theses (B.Sc., M.Sc. and Ph.D.), done in Canada, the U.S.A. and abroad, that are concerned with aspects of the geoscience of Nova Scotia. Most of these theses were completed between 1981 and 1990; however, some theses completed prior to 1981 are included in this Theses List.

GEOSCAN

Report 91-3 was generated from GEOSCAN, which is a bibliographic database providing access to publicly available geoscience literature concerning the Canadian landmass and offshore regions. The database is co-operatively produced from the indexing contributions of federal, provincial and professional geoscience organizations located throughout Canada. The Geological Survey of Canada co-ordinates these indexing activities and provides computer resources and staff in support of GEOSCAN. The Nova Scotia Department of Mines and Energy is an active participant in GEOSCAN, and specific search enquiries and custom indexes can be generated upon request from GEOSCAN, using on-line terminal connections in the Halifax office of the Department, or through the National GEOSCAN Centre, Geological Survey of Canada, in Ottawa.

ACKNOWLEDGMENTS

We thank the staff at the National GEOSCAN Centre, Ottawa, for their help in the preparation of this report. At the Nova Scotia Department of Mines and Energy, we thank Susan Saunders for her dedicated efforts on data entry and word processing, Kathy Mills for editorial assistance, and Dr. Richard Potter, Assistant Deputy Minister and Dan Murray, Director of the Mineral Development Division, for their continued support and encouragement of our GEOSCAN activities.
